

Monetary policy and the krone exchange rate

Governor Ida Wolden Bache

Oslo, 9 November 2023

The krone has depreciated

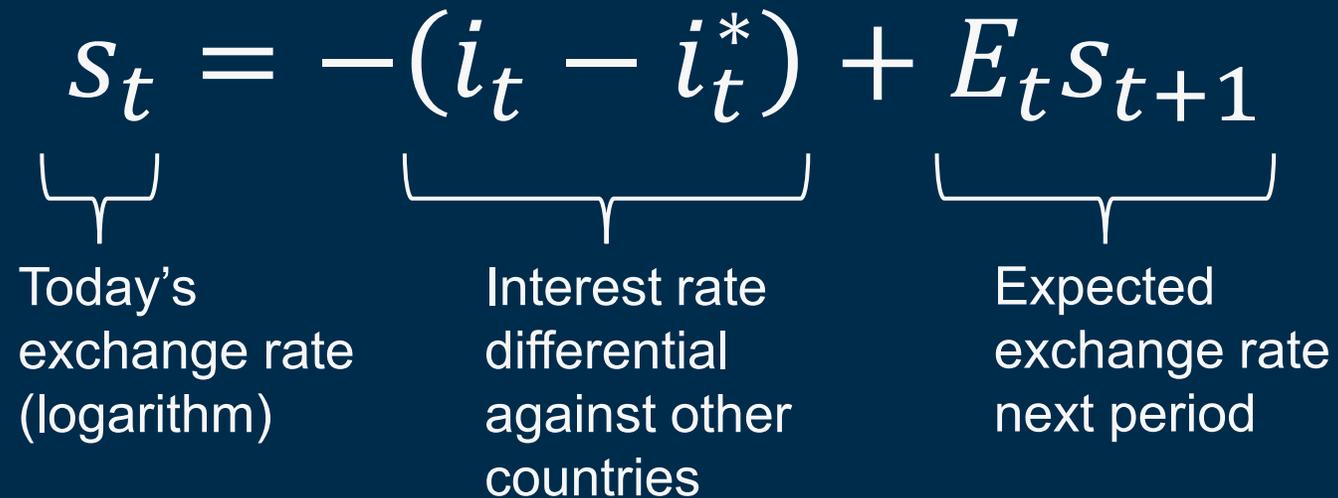

Source: Norges Bank

What influences the krone exchange rate?

Uncovered interest parity

$$s_t = - (i_t - i_t^*) + E_t s_{t+1}$$

The diagram shows the equation $s_t = -(i_t - i_t^*) + E_t s_{t+1}$ with three brackets underneath. The first bracket is under s_t and is labeled 'Today's exchange rate (logarithm)'. The second bracket is under $(i_t - i_t^*)$ and is labeled 'Interest rate differential against other countries'. The third bracket is under $E_t s_{t+1}$ and is labeled 'Expected exchange rate next period'.

Today's exchange rate (logarithm)

Interest rate differential against other countries

Expected exchange rate next period

What influences the krone exchange rate?

Uncovered interest parity with risk premium

$$s_t = -\underbrace{(i_t - i_t^*)}_{\text{Interest rate differential against other countries}} + \underbrace{E_t s_{t+1}}_{\text{Expected exchange rate next period}} + \underbrace{\lambda_t}_{\text{Risk premium}}$$

s_t Today's exchange rate (logarithm)

The real exchange rate

$$Q_t = S_t \cdot \frac{P^*}{P}$$
